This document provides the nucleotide sequences that comprise Illumina oligonucleotides used in Illumina sequencing technologies. These sequences are provided for the sole purpose of understanding and publishing the results of your sequencing experiments.

Proprietary to Illumina

The oligonucleotides are proprietary to Illumina. Their manufacture, use, and sequence information are protected by intellectual property, including issued or pending patents, copyright, and trade secrets. Illumina reserves all rights in the oligonucleotides and their sequence information, except for the strictly limited permissions as follows.

Most Illumina oligonucleotides are specially modified and purified in a proprietary manner to enable and optimize their performance with Illumina instruments. Illumina is the only authorized supplier of the oligos. Illumina has no control over the quality, composition, or compatibility of reagents from unauthorized suppliers. We cannot troubleshoot or provide other support for experiments performed with unauthorized reagents, and we cannot guarantee the performance of Illumina products when used with such reagents.

Limited Permissions

Your permission to copy or distribute sequence information is limited to within your institution for use only with Illumina instruments and associated equipment, consumables, and software. You may not copy or distribute this information outside your institution, except under the following circumstances.

You may distribute outside your institution and publish the sequence information in presentations, manuscripts, or publications authored by you, if the following copyright notice is included:

Introduction

This document lists the adapter sequences for Illumina library prep kits.

For product compatibility information, visit the support pages for your library prep kit on the Illumina website (support.illumina.com).

Reverse Complements

Dual indexing on the following instruments requires the reverse complement of the Index 2 (i5) adapter sequence: iSeq 100, MiniSeq, NextSeq 2000 in Standalone mode, NextSeq 550, NextSeq 500, HiSeq 4000, HiSeq 3000, and HiSeq X Systems.

- ▶ If you are manually creating a sample sheet for these systems, enter the reverse complement of the sequence.
- ▶ If you are using Instrument Run Setup, Illumina Experiment Manager (IEM), BaseSpace Sequence Hub Prep tab, or Local Run Manager to record the adapter sequences, the software automatically creates the reverse complement.
- ▶ NextSeq 2000 uses an in-solution primer for Index 2. However, the DRAGEN on-instrument platform will automatically reverse complement i5 indexes during secondary analysis.
 - ▶ If you are using Instrument Run Setup or manually creating a sample sheet in v2 file format, enter the forward orientation of the sequence.
 - ▶ If you are manually creating a sample sheet in v1 file format, enter the reverse complement of the sequence.

Adapter Trimming Sequences

Sections for kits that recommend adapter trimming include the adapter trimming sequences. The adapter sequence is the sequence of the adapter to be trimmed.

When read length exceeds DNA insert size, a run can sequence beyond the DNA insert and read bases from the sequencing adapter. To prevent these bases from appearing in FASTQ files, the adapter sequence is trimmed from the 3' ends of reads. Trimming the adapter sequence improves alignment accuracy and performance in Illumina FASTQ generation pipelines.

IEM, Instrument Run Setup, BaseSpace Sequence Hub Prep tab, and Local Run Manager record adapter trimming sequences for Illumina kits in the sample sheet. For specific settings, see the documentation for your software. Instrument Run Setup is documented in the *NextSeq 2000 Sequencing System Guide (document # 1000000109376)*.

Sequences for Nextera, Illumina Prep, and Illumina PCR Kits

Adapter Trimming

The following sequence is used for Read 1 and Read 2 adapter trimming.

```
CTGTCTCTTATACACATCT
```

Illumina DNA PCR-Free Prep, Tagmentation Adapter Trimming

The following sequence includes two adapter sequences joined by a plus sign. When performing adapter trimming, the software independently assesses each adapter for trimming.

```
CTGTCTCTTATACACATCT+ATGTGTATAAGAGACA
```

Nextera Mate Pair Adapter Trimming

The following sequence includes two adapter sequences joined by a plus sign. When performing adapter trimming, the software independently assesses each adapter for trimming.

CTGTCTCTTATACACATCT+AGATGTGTATAAGAGACAG

Nextera Transposase Adapters

The transposase adapters are used for Nextera tagmentation.

IDT for Illumina UD Indexes

These unique dual (UD) index adapters are arranged in the plate to enforce the recommended pairing strategy. The index adapters are 10 bases long, instead of the typical eight bases. The IDT for Illumina UD Indexes include IDT for Illumina–DNA/RNA UD Indexes, IDT for Illumina-PCR UD Indexes, and IDT for Illumina–Nextera DNA UD Indexes.

Index Adapters

Index adapter sequences are six bases as underlined. Enter the six underlined bases in the sample sheet.

The index numbering is not sequential, so indexes 17, 24, and 26 are skipped. Additionally, the bases preceding each index adapter sequence are the same, but the two bases following the index adapter sequence can vary.

DNA and RNA Index Adapters

Index adapter sequences are six bases as underlined. Enter the six underlined bases in the sample sheet.

The index numbering is not sequential, so indexes 17, 24, and 26 are skipped. Additionally, the bases preceding each index adapter sequence are the same, but the two bases following the index adapter sequence can vary.
